Customisation made easy

TUTOR INTELLIGENT LEARNING Management System (iLMS), a newly-unveiled smart learning software, can be easily customised to suit the needs of any schools in Malaysia.

Mimos Bhd president and chief executive officer Datuk Abdul Wahab Abdullah says customisation is simple as the technology is already available and teachers can tweak the features based on their needs.

‘For example, a religious school can add religious subjects to the matrix,’ he adds.

The software developed by Perfisio Solutions Sdn Bhd which is a subsidiary of Utusan Melayu (Malaysia) Bhd and Majlis Amanah Rakyat (Mara) - is riding on a technology developed by Mimos.

Abdul Wahab: Simple features

Tutor iLMS enhances learning experience through cognitive profiling and learning objects. A psychometric

test is used to identify a student’s multiple learning intelligence and distinguishes a suitable learning style for him or her.

Once a learning style - whether visual, auditory, kinaesthetic or simply read-and-write method - has been determined, the system will churn out unique lesson plans for the student.

Based on their psychometric test results, students will be presented with learning plans that come in the form of text and graphics, or more engaging formats such as multimedia, virtual reality and even augmented reality.

The system includes monitoring features that enable students, parents, teachers and state education departments to track the student’s learning performance at various stages. **mb-e**
