# Mimos wins award

**KUALA LUMPUR:** Mimos has received a Frost & Sullivan award for its applied research of micro electro mechanical systems (MEMS).

MEMS technology is an emerging research field which combines several disciplines, including electrical engineering, electronics, information, machinery, materials, and biochemistry.

"It is revolutionising every product category by combining the best of semiconductors, microbiology, optics and high-frequency wireless communications," said Mimos president and chief executive Datuk Abdul Wahab Abdullah.

"There is revolutionary potential for MEMS, both locally and globally, for agricultural productivity, environmental pollution and health care."

The research organisation was named Industry Innovation and Advancement (Precision Agriculture) Research and Development Organisation of the Year.

The Frost & Sullivan Growth Excellence Award was held in California in the United States on Sept 18.
